SMART APP OPERATED LOCKS

DESIGNED IN NEW ZEALAND BY

LOKtouch™

www.loktouch.com

## Easily manage your property access with smart app operated locksets

appLOK™ is a series of smart APP operated locksets covering various installation applications for residential and rental properties. All locks and key boxes connect to a simple yet smart mobile APP that utilizes Bluetooth technology to set up and manage your property access requirements.

Property owners and managers can set various opening times either directly at the door via Bluetooth or remotely using the App or Wi-Fi functions. Remote code access is also available without connecting to the lockset using the unique built-in code algorithm system. All locks in the series have a range of opening options, including RFID tags, Fingerprint, Code pad, Phone, and mechanical key.

### TECHNICAL PARAMETERS
